

Ideal Customer Profile

Multi Lingo AI — the language-practice companion

Practice any language, for real life. Slang, grammar and stories you'll actually use — alongside your teacher, class or app. Built by a working tutor.

Grasshopper IT Solutions LLC • Prepared 9 September 2026
Internal go-to-market document — not for public distribution

1. What the product is

Multi Lingo AI is a **companion app for people already practising a language** — not a course and not a replacement for one. A learner's teacher or app owns the syllabus and the streak; Multi Lingo AI owns the gaps they leave: real slang and local expressions, grammar drawn from actual lessons, bilingual stories, word games, a universal dictionary and translator that explain *from the language the user already speaks* (not English-by-default), and short sessions that fit five spare minutes.

Deepest support today for Portuguese (European & Brazilian), English (US & UK) and Spanish (Spain & Mexico), with French and German also supported. Free tier is usable indefinitely with a daily cap on AI features; paid tiers (Voyager €7.99/mo, Maestro €24.99/mo) raise or remove the cap.

2. Primary ICP — "The Committed In-Between"

The single best-fit user. Everything below describes this person.

Who	Adult (25–55), already taking weekly lessons with a tutor, in a class, or ~6+ months into a structured app (Duolingo, Babbel, Busuu). Serious enough to pay for progress, not a casual dabbler.
Situation	Between lessons for days at a time and losing momentum. The app teaches structure and streaks but not how people actually speak. The teacher explained something that didn't stick.
Goal	Keep the language "warm" between sessions, close the gap between textbook language and real conversation, and show up to the next lesson having made progress rather than lost ground.
Trigger to adopt	An upcoming trip; a frustrating conversation abroad or with family; a plateau after months of app streaks; a tutor recommending outside practice.
Why they pay	They already spend €15–40/hr on a tutor or €7–13/mo on an app — a few euro more for the connective tissue between sessions is an easy yes.
Where to reach	Language-learning subreddits and Discords, tutor marketplaces (iTalki, Preply) as a companion recommendation, polyglot YouTube/TikTok, expat and travel communities.

3. Secondary segments (good fit, smaller or harder to reach)

3a. The Heritage Reconnector

- Grew up around a language (parents, grandparents) but never formally studied it; can understand more than they speak.
- Wants colloquial, family-register language and cultural context — exactly the slang-and-expressions focus, and the "explain from the language I already speak" engine fits a bilingual-ish starting point.
- Portuguese and Spanish depth is a direct match for large diaspora populations.

3b. The Relocating Professional / Trailing Partner

- Moved (or about to move) to Portugal, Spain, Brazil, Mexico for work or a partner's job.
- Needs practical, situational language now — "Plan Your Trip", professional tools, everyday situations — and often has a tutor already; Multi Lingo AI is the daily-reps layer.
- High willingness to pay; time-poor, so five-minute sessions matter.

3c. The Serial App-Learner Hitting a Wall

- 500+ day streak, still can't hold a real conversation, actively looking for "what's next".
- Doesn't necessarily have a tutor — the app can stand alone for them — but converts on the promise of "the stuff your app skips".
- Price-sensitive; likely starts and stays on Free longer, upgrades around a trip.

3d. The Independent Tutor (channel, not just user)

- Language tutors on iTalki/Preply/independent who want their students practising between paid sessions.
- The published tutor directory and "built by a working tutor" positioning make them a natural referral partner.
- One tutor can bring 10–40 students; worth a dedicated referral motion later.

4. Profile attributes

Age	25–55, concentrated 30–45
Languages	Target: Portuguese, Spanish, English first; French/German secondary. Source language: any — the product's edge is not assuming English.
Geography	Portugal, Brazil, Spain, Mexico, plus diaspora and relocators in US, UK, Western Europe. English-worldwide marketing site; localised app.
Devices	Mobile-first usage in short bursts; also desktop during study sessions. Web app (PWA-style), push notifications opt-in.
Spend behaviour	Already paying for a tutor and/or a language app. Comfortable with €8–25/mo subscriptions. Annual plans attractive (~17% saving).
Tech comfort	Mid-to-high. Uses AI tools already; not put off by "AI" but sceptical of "generic GPT wrapper" — the tutor-authored grammar library is the counter.

5. Jobs, pains and gains

Jobs to be done

- "When I have five spare minutes, help me practise something that matters, not restart a lesson."
- "Help me sound like a person, not a textbook, when I get there."
- "Help me remember the thing my teacher explained last week."
- "Explain this in my language, not in English."

Pains it removes

- Momentum lost between lessons; the plateau after months of streaks.
- Apps that only support one dialect and assume you think in English.
- Textbook phrasing that gets blank looks in real conversations.
- No structured way to practise the loose ends (a stray word, a shaky rule).

Gains it delivers

- Shows up to the next lesson ahead, not behind.
- Real slang and local expressions, sorted by dialect.
- Low-guilt practice — no streak to protect, any order, any length.
- Grammar answers that come from real teaching, on demand.

6. Who this is NOT for (disqualifiers)

- Absolute beginners with no course or teacher — there is deliberately no syllabus or starting path.
- People who want a single do-everything app to replace all other tools.
- Learners who need live human conversation now — live tutor sessions are planned, not shipped.
- Casual "maybe someday" dabblers who won't pay and won't return — fine on Free, not the ICP.
- Enterprise / L&D buyers — no team, SSO or admin-seat product today; consumer self-serve only.
- Learners of languages outside the supported set expecting the same depth.

7. Positioning notes for this ICP

- Lead with "companion, not course" — it disarms the "I already have an app/teacher" objection instead of fighting it.
- Say "practice", never "learn/learning" — the frame is doing something you already want to do, not homework.
- Name the enemy: streak guilt, textbook phrasing, English-by-default apps, generic AI wrappers.
- Proof points: authored by a working polyglot tutor; grammar from real lessons; dialect-aware; any source language.
- Free tier is the trial — conversion event is usually an upcoming trip or a visible plateau.
